

ABSTRACT OF THE DISCLOSURE

5 A design support system is constituted for a user to design a construction material (a fender or the like) and to obtain the result of the designing through connection to a wave server. The system includes a database performing calculation and output based on data entered by the user, and storing the process thereof. The calculation result can be obtained by the user by e.g. downloading, and also is recorded into the database. A person on a maker side, different from the user, may refer to the database in order to check a design error.
